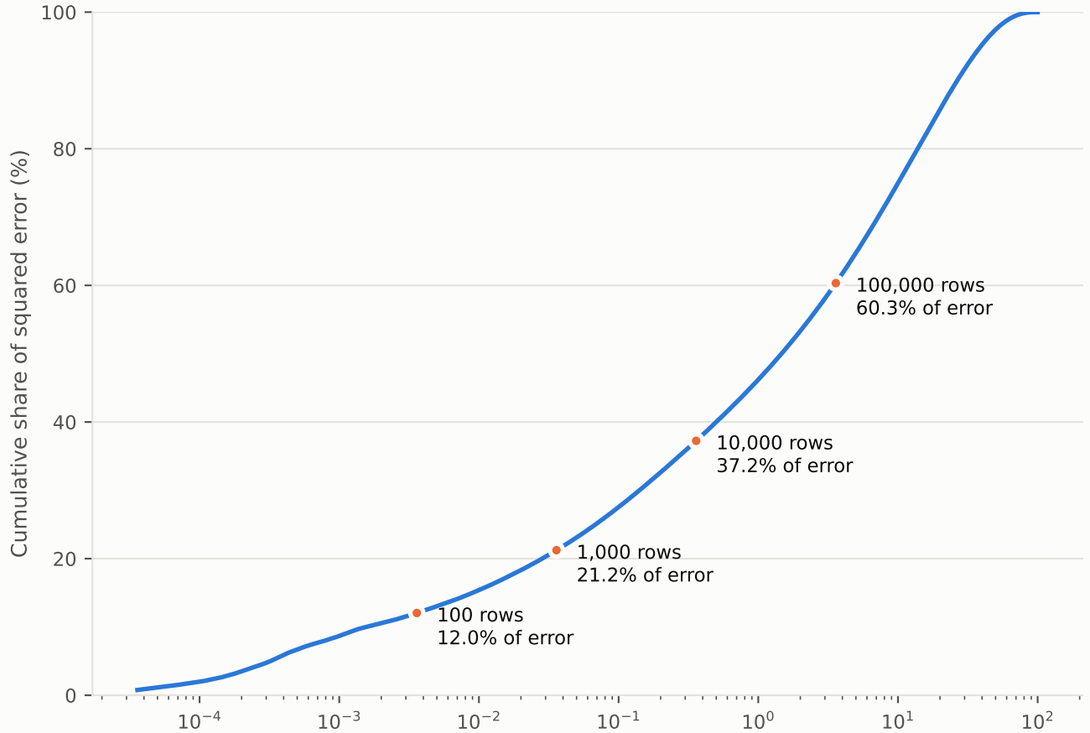
Where the score is decided

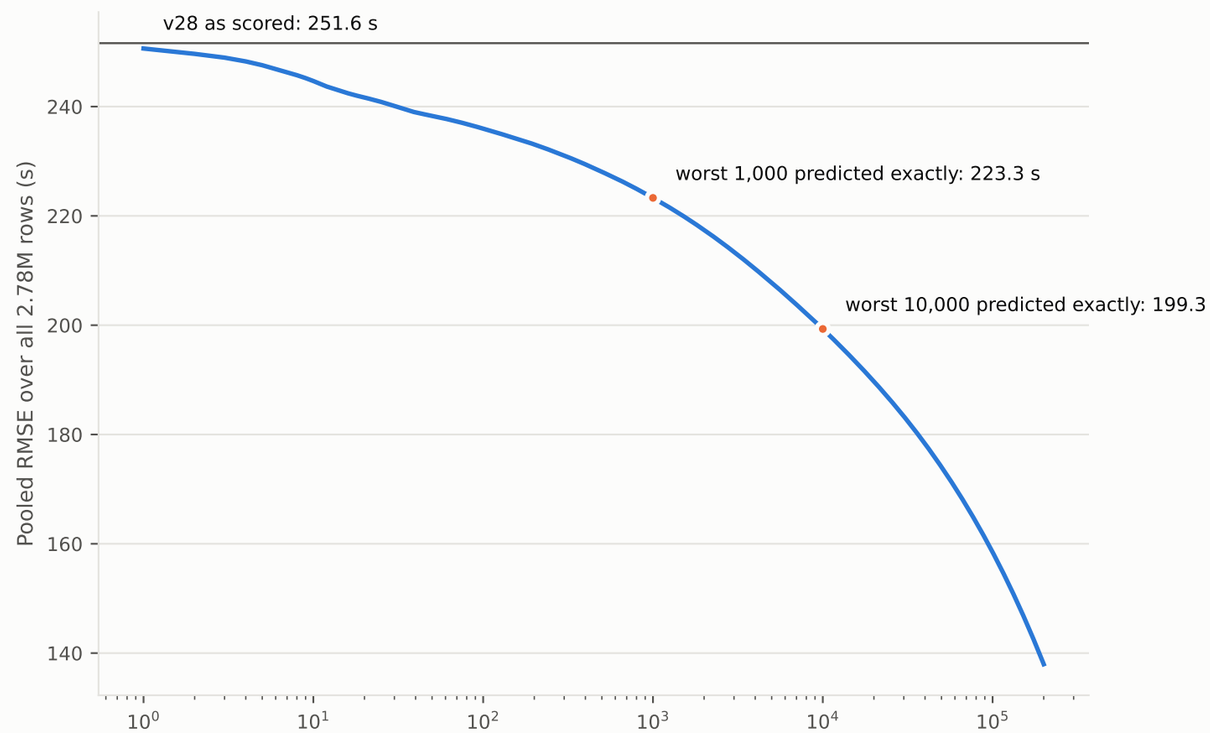
v28 out-of-fold, seed 42, 16 folds pooled — 2,784,530 rows, RMSE 251.60 s

Squared error is carried by a few thousand rows



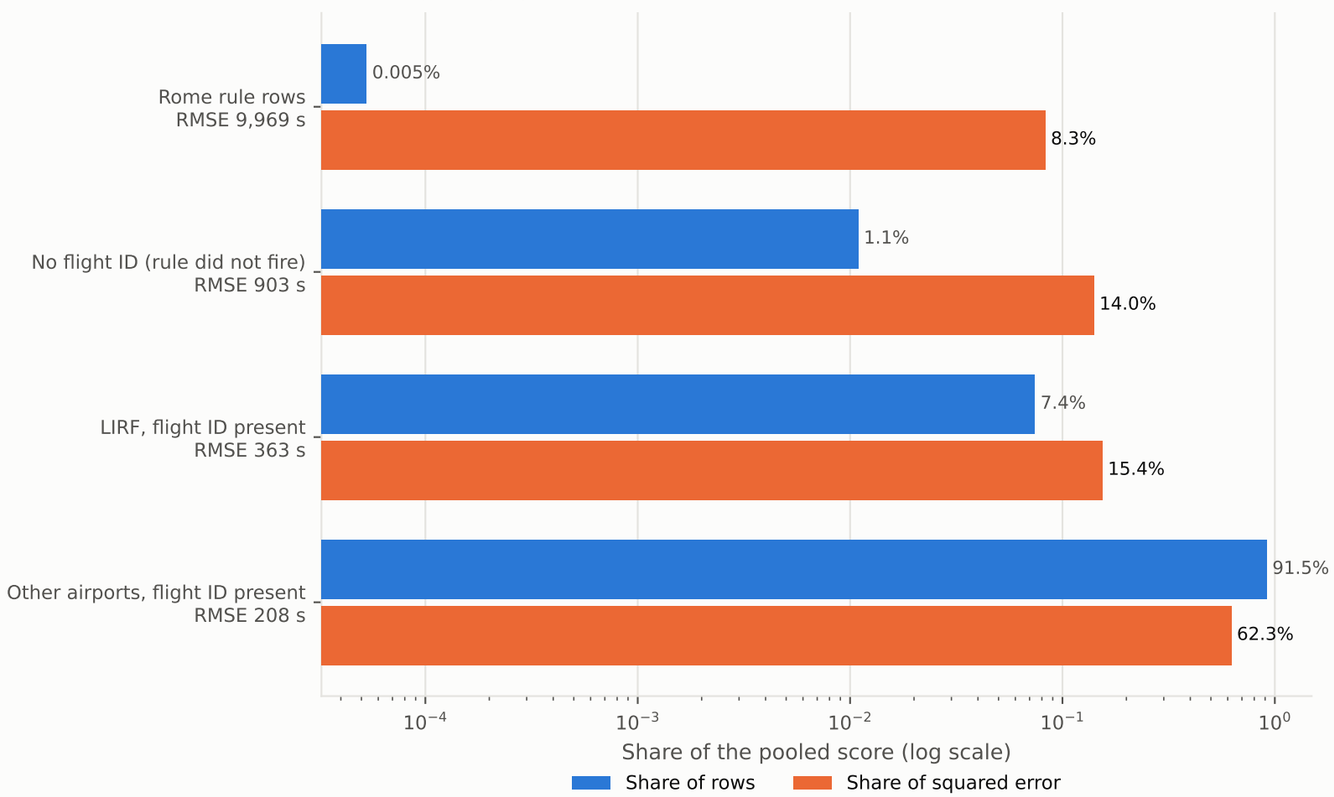
Share of the 2.78M scored rows, worst first (log scale)

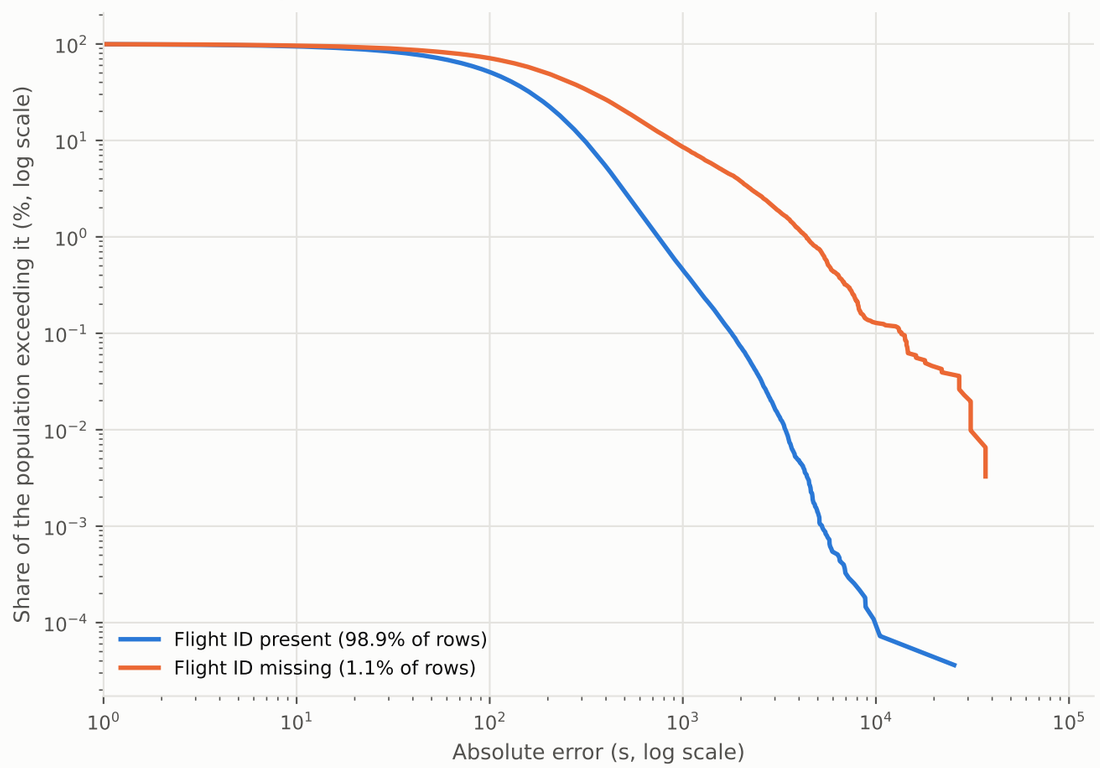
The headroom in the worst rows — nothing is ever dropped



Worst rows given a perfect prediction (log scale); they stay in the score

Four disjoint populations, and what each costs





How far wrong, and how often
